Water
for
Cambodia

**Clean Water
A Human Right
Not a Luxury**

Today, Cambodia continues to struggle as it works to recover from decades of war, genocide and political strife. The resulting poverty and under development leaves millions without adequate clean water, educational opportunities and infrastructure. Eighty percent of the population resides in rural Cambodia; there is almost no electricity, few paved roads and no clean water delivery systems. Although water sources are often abundant, they are unsafe to drink.

Thanks to YOUR generous support Water for Cambodia continues to play an internationally recognized role in addressing these very fundamental human needs.

The statistics:

- *6.3 million Cambodian people do not have access to clean drinking water*
- *75 % of the rural population do not have access to adequate sanitation*
- *20% of the deaths of children under 5 are due to waterborne diseases*
- *Levels of education and school attendance are deeply affected by children's health and their ability to attend school*

Our mission is to provide clean water, hygiene and hygiene education to rural Cambodian families, improving their health and helping to break the cycle of poverty.

With your 2018 Donations Water for Cambodia:

Installed **2891** Biosand Filters

Built **143** Latrines

Dug **21** Wells

Provided
Hygiene Education to several
thousand beneficiaries

DISTRICTS WHERE OUR BIOSAND FILTER INSTALLATIONS ARE LOCATED

Because of you
over 22,000 biosand filters are
providing clean water to more than
130,000 people in Cambodia

For an interactive look check out the Google Map on our website homepage.

Family Story

This is the Luy Family. Mrs Chim Luy is a 54 year old mother living in Dou Num Village in Siem Reap Province. Both she and her husband are farmers. They have had a biosand filter for 3 years and use the filter 3 times a day for drinking, food preparation and washing clothes. Her daughter takes a bottle to school each day.

They are very happy with the filter. Since they have been using the biosand filter they all have had much less diarrhea and stomach distress. This has saved them a lot of money they used to spend on doctor visits and treatment.
